Answer (D): Let r be the rate that Lauren bikes, in kilometers per minute. Then $r + 3r = 1$, so $r = \frac{1}{4}$. In the first 5 minutes, the distance between Andrea and Lauren decreases by $5 \cdot \frac{1}{4} = \frac{5}{4}$ kilometers, leaving Lauren to travel the remaining $15 - \frac{5}{4} = \frac{55}{4}$ kilometers between them.

Solution Circle A has circumference of $2 \cdot 100 \cdot \pi$; circle B has circumference of $2 \cdot r \cdot \pi$. Since after B's trip, the 2 circles have the points of tangency, that means A's circumference is an integer multiple of B's, ie, $2 \cdot 100 \cdot \pi / 2 \cdot r \cdot \pi = 100/r$ is an integer, or r is a factor of 100.

$100 = 2^2 \cdot 5^2$, which means 100 has $(2+1)(2+1) = 9$ factors. 100 itself is one

9th AMC 10 B 5 (1-~)'~=' 15. Answer (A): By the Pythagorean Theorem we have $a^2 + b^2 = (b + 1)^2$, so $a^2 = (b + 1)^2 - b^2 = 2b + 1$. Because b is an integer with $b < 100$, a^2 is an odd perfect square between 1 and 201, and there are six of these, namely, 9, 25, 49, 81, 121, and 169. Hence a must be 3, 5, 7, 9, 11, or 13, and there are 6 triangles
