the ground called?

Science Quiz: Earth Science: Earthquakes

Earthquakes are formed as a result of tectonic movement in the earth's crust. The magnitude of an earthquake is directly proportional to how dangerous it is and the damage it will result in. During our science classes we were able to understand how they occur. Just how much did you understand about earthquakes?

Science: The Ultimate Earthquake Quiz! - ProProfs Quiz

Earthquakes are caused by the slow deformation of the outer, brittle portions of "tectonic plates", the earth's outermost layer of crust and upper mantle. Due to the heating and cooling of the rock below these plates, the resulting convection causes the adjacently overlying plates to move, and, under great stress, deform.
