The finite element approach itself comes in two basic forms. the variational, where the PDEs are replaced by a more fundamental integral variational pnciple (from which they arise through the calculus of variations), or the weighted residual (Galerkin) approach, in which the PDEs are multiplied by certain functions and then ...

Methods of grid generation based on the theory of harmonic maps are presented in this chapter. Algorithms for structured and unstructured adaptive grids in two-dimensional and three-dimensional cases as well as for grids on surfaces are described in detail. All methods are based on grid nodes movement (r-refinement).

Handbook of grid generation (1999 edition) | Open Library

This book is a good collection of papers ranging from structured grid generation to unstructured grids, going through concepts of geometric modeling that are needed in grid generation. Maybe "handbook" in the title may be misleading for those who are not experts in the field and who could interpret it as a "step-by-step guide" to implementation.

The generation of a grid on a boundary surface is a necessary prelude to the generation of a volume grid, and this is generally done by representing the boundary surface parametrically by NURBS or another spline formulation, and then generating the grid in parameter space either algebraically or using PDEs.
