Immunohistochemistry is the use of specific antibodies to stain particular molecular species in situ. This technique has allowed the identification of many more cell types than could be visualized by classical histology, particularly in the immune system and among the scattered hormone-secreting cells of the endocrine system, and has the potential to improve diagnosis, prognosis and therapeutic options of cancer.

Immunohistochemistry (IHC) is a widely used immunostaining technique that detects an antigen of interest in the cells of a fixed tissue section, often analyzed with a light microscope. This handbook provides a comprehensive introduction to IHC that is well-suited for researchers new to the technique or experienced scientists looking for a quick refresher.
