The NSF-ICF is a facility for storing, curating, and studying meteoric ice cores recovered from the glaciated regions of the world. It provides scientists with the capability to conduct examinations and measurements on ice cores, and it preserves the integrity of these ice cores in a long-term repository.

About Ice Cores | NSF Ice Core Facility

Common wick drains have a plastic core surrounded by a geotextile: [E] Cross-Section of PVD. Hansbo (1979) used a finite-element analysis and reported that the equivalent diameter of a drain is given as: $d_w = 2 * ((b + t) / \pi)$ (1)
Where: d_w = equivalent diameter of the drain
 b = width of the prefabricated

Geotechnical engineering, also known as geotechnics, is the branch of civil engineering concerned with the engineering behavior of earth materials. It uses the principles of soil mechanics and rock mechanics for the solution of its respective engineering problems. It also relies on knowledge of geology, hydrology, geophysics, and other related sciences.

In Cytoscape.js, the core is a programmer's main entry point into the library. From the core, a programmer can run layouts, alter the viewport, and perform other operations on the graph as a whole. The core provides several functions to access elements in the graph. Each of these functions returns a collection, a set of elements in the graph.

In military engineering, earthworks are, more specifically, types of fortifications constructed from soil. Although soil is not very strong, it is cheap enough that huge quantities can be used, generating formidable structures. Examples of older earthwork fortifications include moats, sod walls, motte-and-bailey castles, and hill forts. ...

A simple way to link or anchor the three tests with four common items to the same scale is to first conduct the Rasch analysis with the data from test form A. When the test form B data are collected and analyzed, anchor the four items common to the item difficulty values computed through the analysis of the test form A data.
